

Recommended Controller Software Version: Omada Controller v5.9 or above

New Features/Enhancements:

1. Supports IPv6.
2. Supports Bonjour.
3. Supports PMF.
4. Supports IPv6 ACL/URL Filtering/Guest Network.
5. Supports LLDP (Link Layer Discovery Protocol).
6. Supports features for Ping, Traceroute, Packet Capture, Terminal and Device Info.
7. Supports Lock to AP function.
8. Supports 802.11r.
9. Supports Multicast/Broadcast Management.
10. Supports multiple RADIUS servers and report of RADIUS username.
11. Supports PPSK.
12. Improved stability.

Bug fixed:

1. Fixed the issue that the 5G encrypted SSIDs will become unencrypted after deleting all 2.4G SSIDs and restarting EAP.
2. Fixed the issue that clients cannot obtain the ip under Dynamic VLAN when associate with the MAC-Based Authentication SSID.

Notes:

1. This version of firmware is applied to the Omada APP v4.10 or above.
